01 ACT 1 · THE PULL

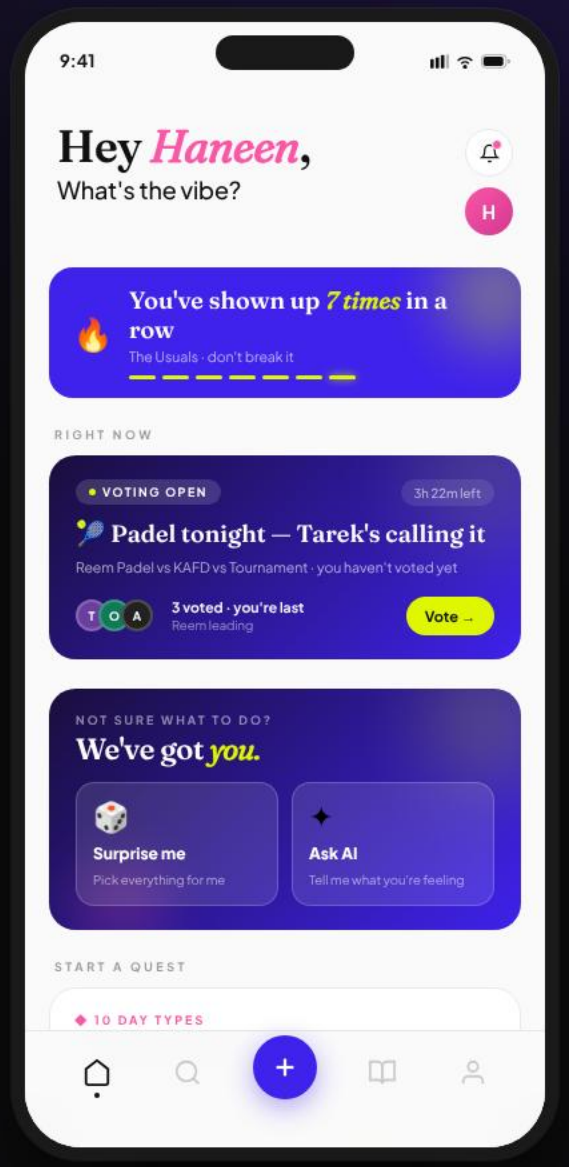

Demand that starts before anyone searches for a restaurant.

Groups open Side Quests with a plan already moving: a live vote, a streak with their friends, ten day types. Your restaurants receive that intent as a whole group, not a single diner.

SIDE QUESTS ONLY

No partner call yet. This is where the demand is created.

Group demand | Pre-search intent | Riyadh Gen Z

Play flow ← →

02 ACT 2 · THE PLAN

Dinner Night is the core journey, and Servme restaurants are where it lands.

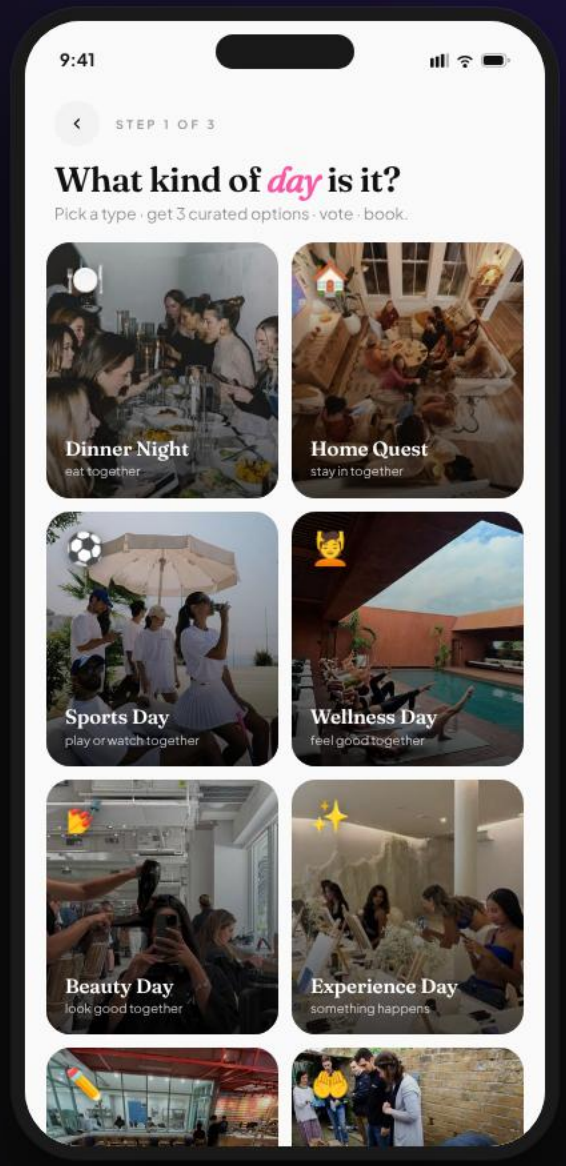

Of ten day types, Dinner Night is the one groups pick most. Every time it is tapped, a reservation is the expected outcome.

SIDE QUESTS ONLY

`Dinner Night → Servme as a booking rail`

The day type decides which partner books the plan.

Dinner Night | Core journey | Booking-led

03

ACT 2 · THE PLAN

Party size, time and area: exactly what your availability API needs.

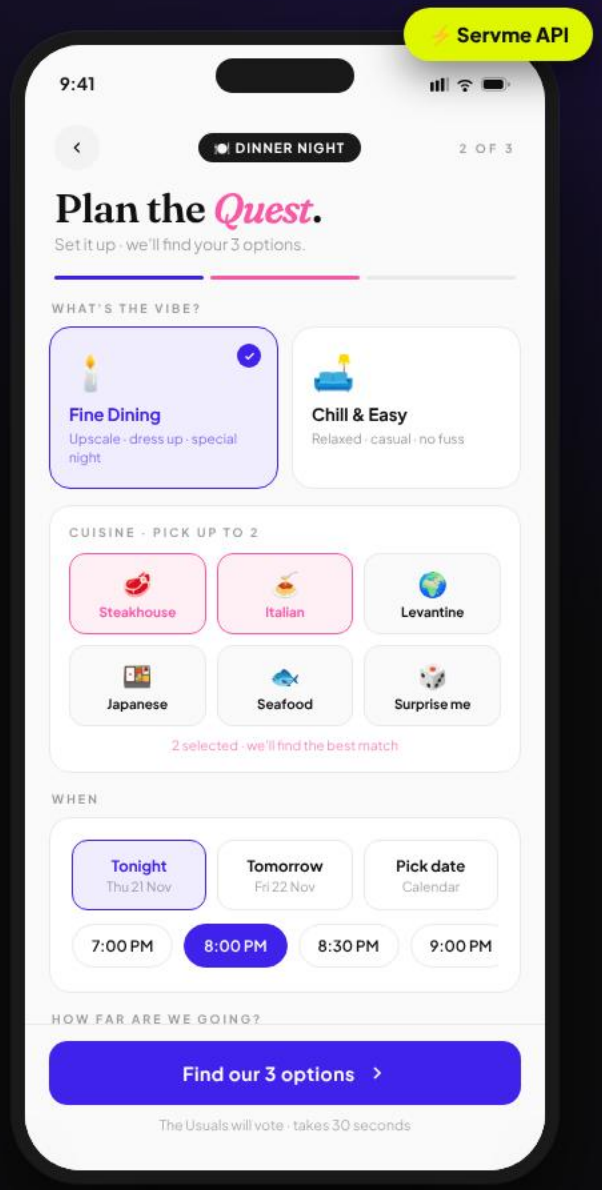

Five taps set the vibe, cuisine, time, distance and the group. Six people, tonight, 8 PM, within 15 minutes becomes one structured availability request.

SERVME · CHANNEL API

```
Availability request
6 guests · tonight · around 8 PM
→ live time slots per restaurant
```

Only restaurants with a real table for the whole group move forward.

Party size | Date + time | Area radius

Split the bill	PAY	قطّة
Quest journal	SERVME	After

Play flow ← →

04 ACT 3 · THE DECISION

Three options, all bookable. No dead ends after the vote.

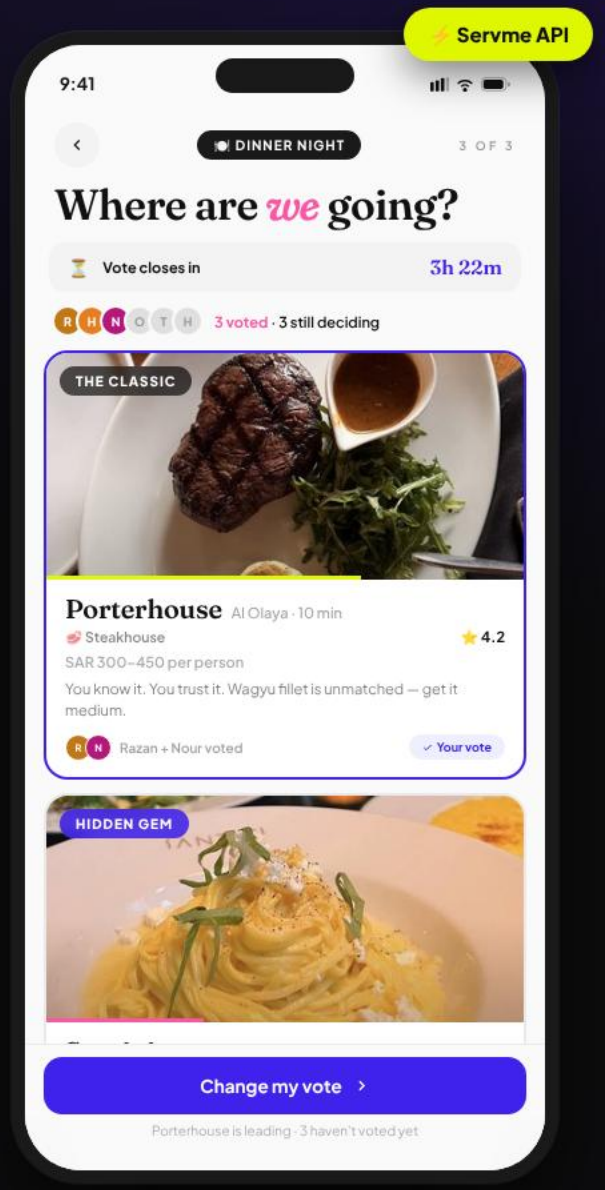

The Classic, the Hidden Gem, the Why Not. Each card is a restaurant Servme has confirmed can seat the group, so whichever option wins, the booking goes through.

SERVME · CHANNEL API

```
Availability re-checked while the vote runs
Slot gone → option swapped before close
```

Your live inventory decides what the group sees.

Live-slot filter | Curated trio | No failed bookings

Six friends. One decision. *One Servme booking.*

Play flow ← →

05 ACT 3 · THE DECISION

Porterhouse wins four of six. The slot is checked one last time.

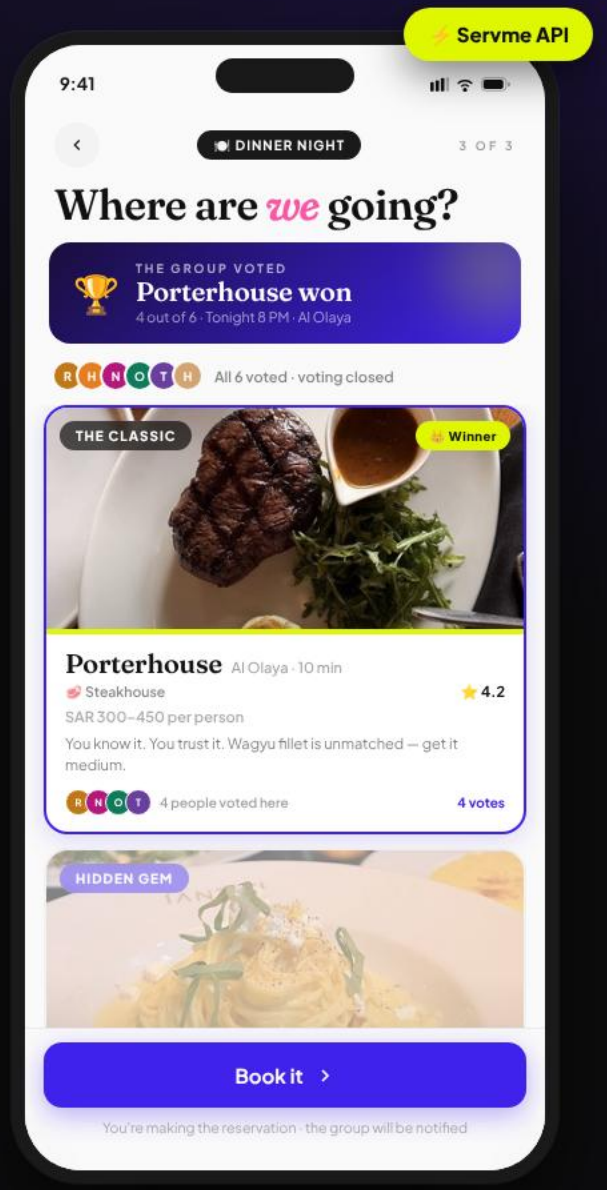

The decision closes inside the app with votes attributed, and the organiser moves straight to booking while the table is still free.

SERVME · CHANNEL API

```
Availability request
final check on the winning slot
```

Seconds between decision and booking.

4 of 6 | Final slot check | Organiser books

Split the bill	PAY	قطّة
Quest journal	SERVME	After

Play flow ← →

06 ACT 4 · THE NIGHT

One tap writes the reservation into the restaurant's Servme book.

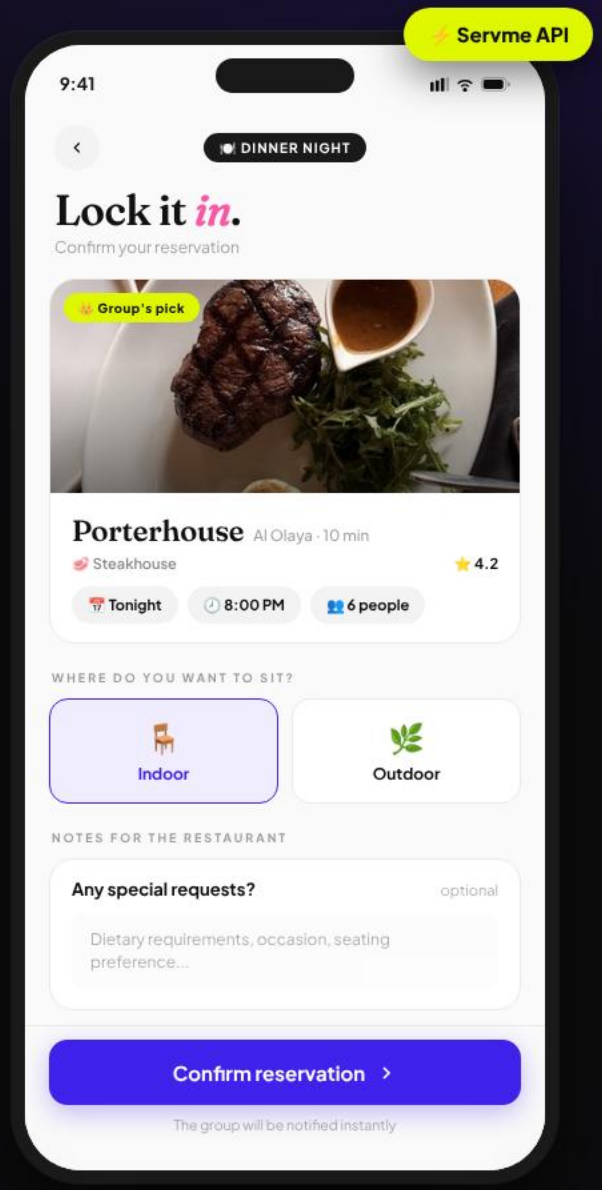

Seating preference, notes for the host and the guest list map straight to a partner reservation. Where the restaurant sets a deposit in Servme, the group pays it at booking through the restaurant's own payment setup.

SERVME · CHANNEL API

```
Create reservation
seating preference · lead guest · notes
deposit → restaurant payment setup
```

Side Quests never holds the money. Open question: can one deposit be split across the group?

Seating preference | Host notes | Deposit at booking

07 ACT 4 · THE NIGHT

Confirmed on both sides: the group's phones and the host stand.

The booking sits in Servme like any other channel booking, with Side Quests as the source, so staff manage it from the dashboard they already use. Every guest is notified and can add it to their calendar.

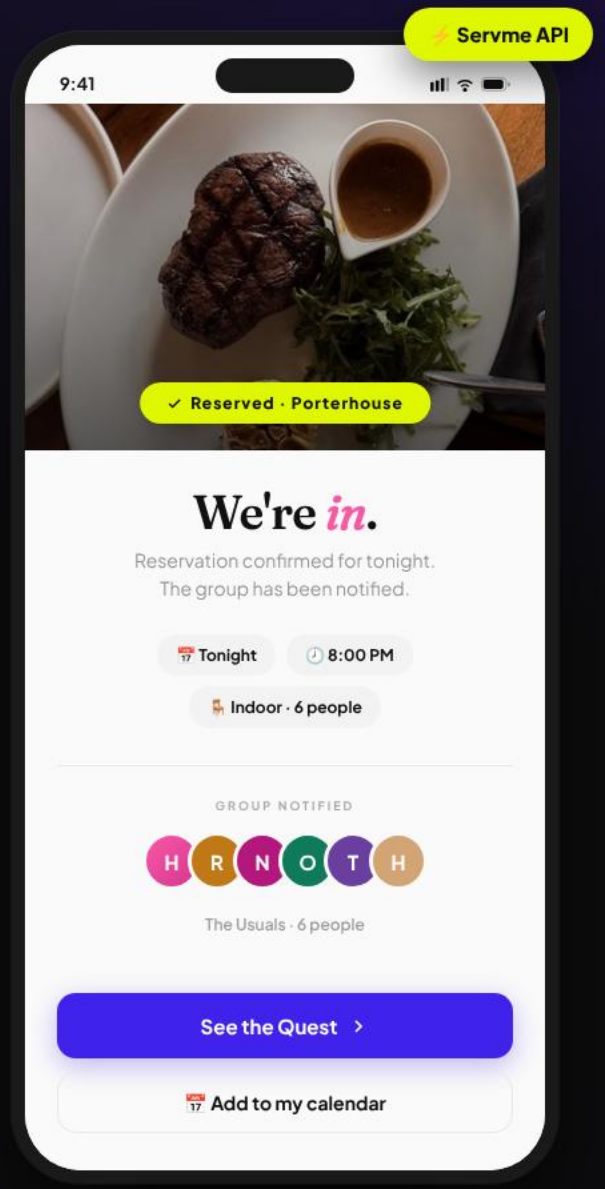

SERVME · RESERVATION

`Reservation ID stored · source tagged`

`Changes + cancellations synced back`

Zero new tools for restaurant staff.

Source: Side Quests | Same dashboard | Group notified

08

ACT 4 · THE NIGHT

Arrival: the host seats the group in Servme, exactly as today.

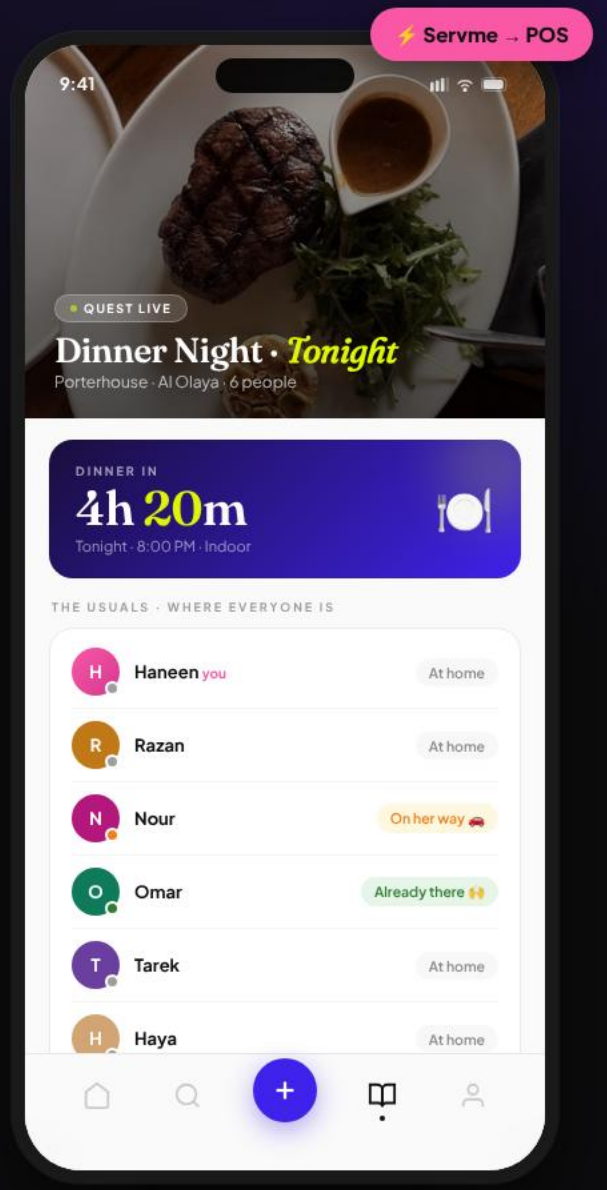

Side Quests shows who is on the way and who has arrived. At the restaurant, the team seats the party in Servme, and wherever the restaurant's POS (such as Foodics) is linked, the table carries through to the bill.

SERVME → POS

```
Status: seated (Servme)
→ table + bill on the restaurant POS, where linked
```

Designed to cut no-shows: the group sees each other on the way.

Live arrivals | Seated in Servme | POS in sync

Quest live	POS	Day of
Split the bill	PAY	قطّة
Quest journal	SERVME	After

09 ACT 5 · THE MONEY

The bill is split the way the table already talks about it.

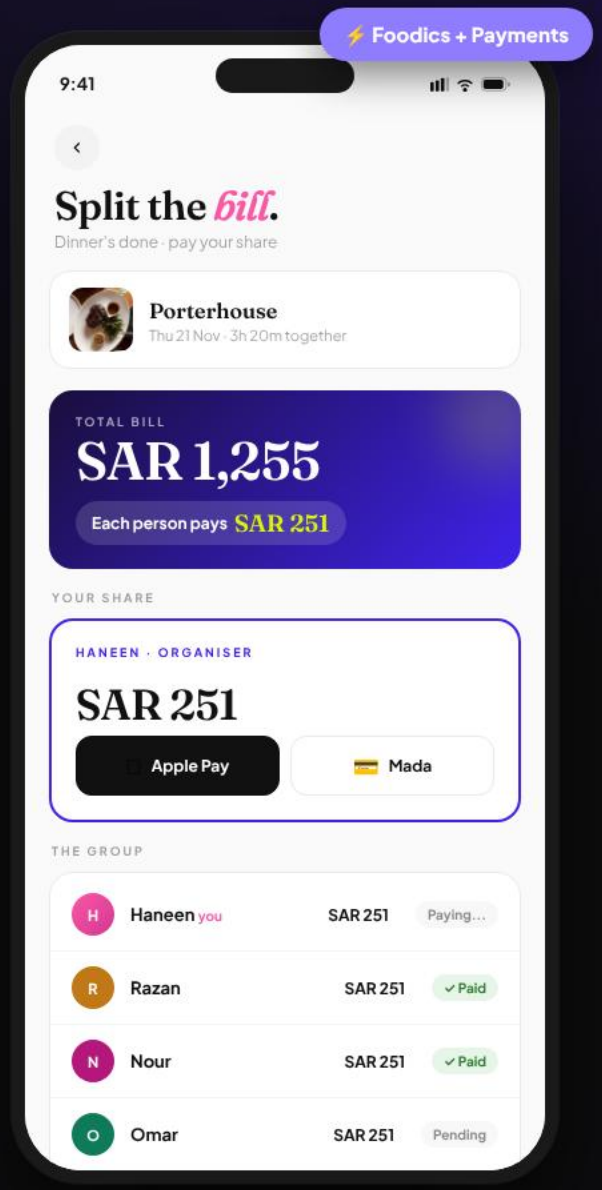

SAR 1,255 across the five people who showed up, SAR 251 each, with any deposit already deducted. Where Foodics is connected the bill is read automatically; otherwise the total is entered once.

FOODICS + LICENSED PAYMENTS

```
Closed bill read from Foodics (if connected)
Payments via Moyasar / Tap
```

Money moves through licensed providers only, never through Side Quests.

Deposit deducted · Apple Pay · Mada · Per-person status

10 ACT 6 · THE MEMORY

The night ends as a memory, and the next booking starts here.

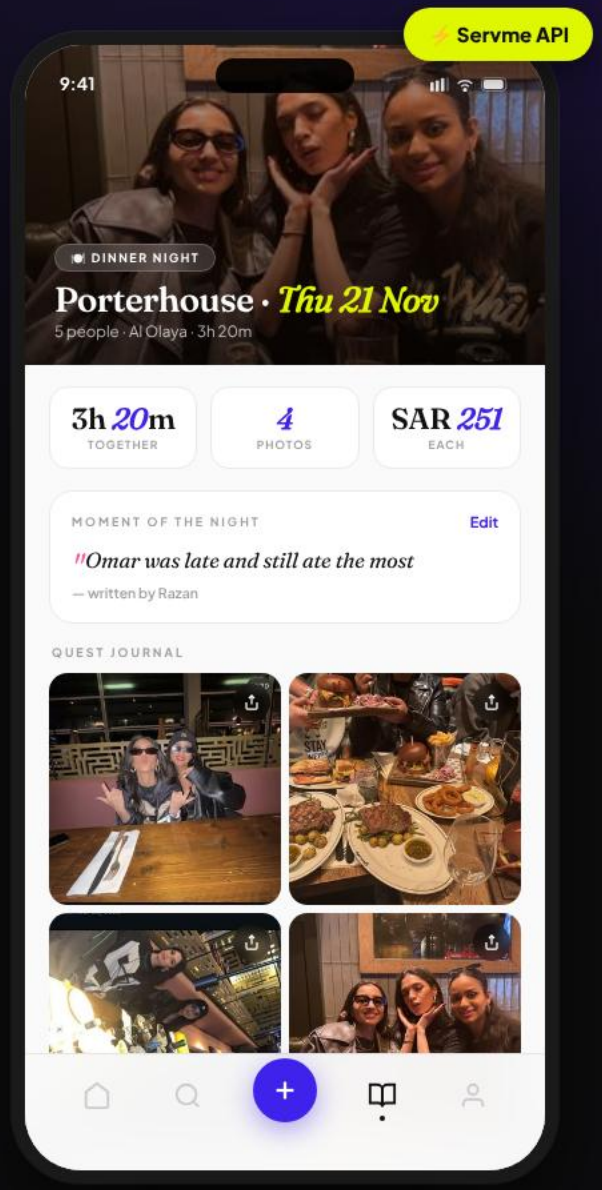

Photos, cost each, who showed up, a rating. The group shares it, and the restaurant they loved is one tap away from being their next Quest.

BACK TO SERVME

`Rebook → new availability request`

Repeat group visits, sent back to your restaurants.

Shareable recap | Rating | Rebook loop
